Values for Soldiers, tanks, vehicles and weapons

This table has evolved and continues to evolve as more research is done. The basic values are based on but not necessarily the same as *Rapid Fire!* values. Any inaccuracies, duplications and omissions are my sole responsibility. The column showing the number of rounds carried by each gun/vehicle/weapon is scaled down from actual numbers. Ranges and other distances shown are based on *Rapid Fire!* Rules and these should be consulted when using these tables.

The tables show (in order)

- Two methods of calculating troops costs, equipment costs
- Tanks and other vehicles (much of this is still under review)
- Crew served and individual weapons, artillery
